Note:-

The quality of waste waters discharged into common sewer or collection system should be such to ensure that the waste water.

1. does not damage the sewer by physical or chemical action,
2. does not endanger the health of the workers cleaning the sewer,
3. does not upset the processes that are normally used in sewage treatment;
4. does not overload the common treatment plant;
5. does not damage the crops or affect the soil in case the effluent after treatment is used for irrigation and,
6. does not create fire and explosion hazards due to certain constituents present in the effluent.

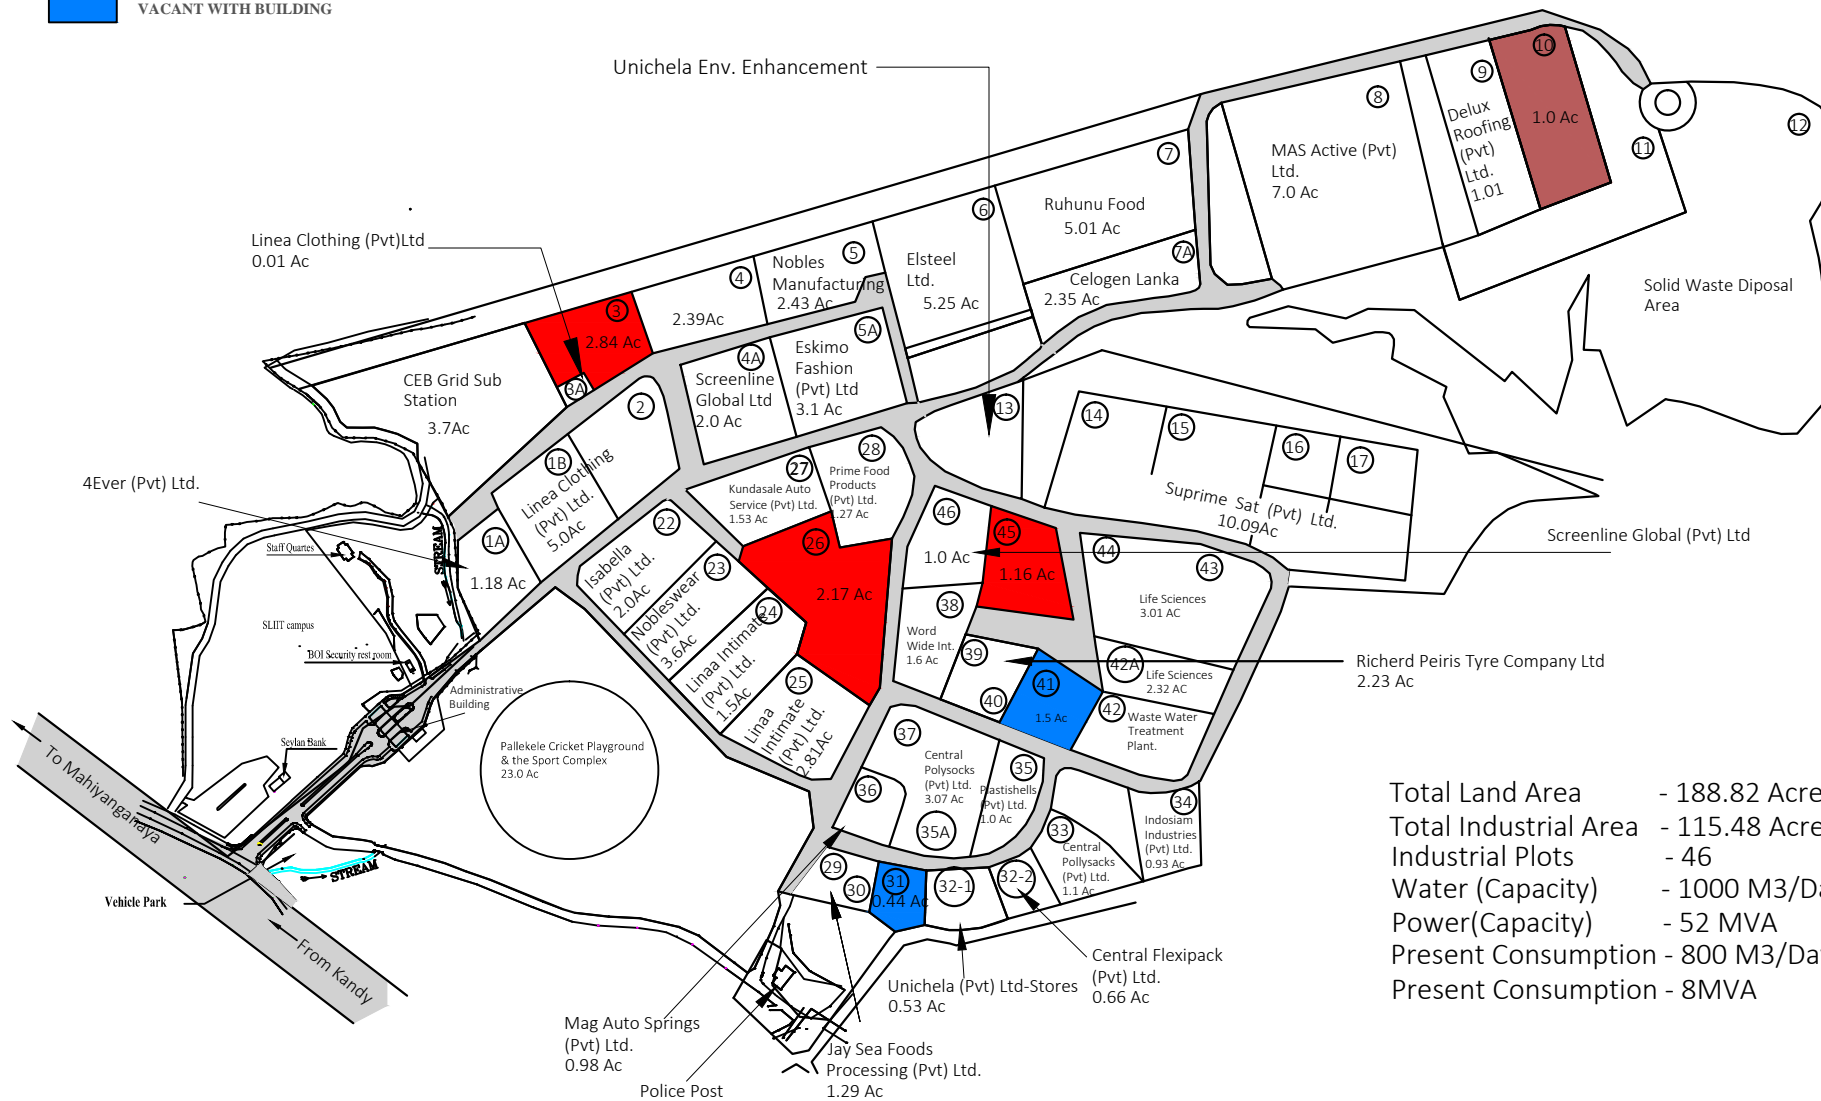

The industrial effluents not conforming to the specified tolerance limits or containing solids such as ash, sands, feathers, large floatable, straw, plastics, wood, lime slurry, residue, beer or distillery slops, chemical or paint residue, gross solids from cannery wastes, cinder, sand, tar, hair, rags, metal shavings, garbage and broken glass shall not be permitted to be discharged directly into the common sewer line leading to the waste water treatment plant. Such effluents have to be subjected to an inhouse treatment to bring them to be within the suggested tolerance limits and or to free them from the undesirable material mentioned above prior to discharge into the sewer line
